Making level crossings safer through pragmatic, effective risk evaluation and modelling, since 1990

The "Safety spotlight" section of LXinfo takes stories with parallels in other parts of the world. As always we look at a story which should be of world-wide interest.

This month's safety spotlight covers the International Level Crossing Awareness Day (ILCAD), held on June 9th, 2011. ILCAD goes from strength to strength with active participation on five continents. The hard work of Isabelle Fonverne at the International Union of Railways (UIC) is central to the growing engagement with ILCSD which truly brings the issue of level crossing safety to a global audience.

LXinfo welcomes comment from our readers. Indeed, it would be appropriate for you, our readers, to suggest topics for inclusion in the "safety spotlight" section: or, going further, to write a spotlight piece. Pieces should normally be no more than 750 words, in English and not promoting a single commercially sourced product.

To launch the International Level Crossing Awareness Day (ILCAD), June 9th, 2011, the International Union of Railways (UIC) together with PKP Polish Railways Lines, one of the most active ILCAD partners, held a press conference in Warsaw on June 7th, 2011 with the theme "What else can be done to improve safety on rail-road level crossings?"

Speakers at the press conference were:

- Mr. Robert Kuczyński Spokesman of Investments Implementation Centre IRRP, PKP Polish Railway Lines Company Mr. Jean-Pierre Loubinoux Director General, UIC Mr. Andrzej Massel Polish Ministry of Infrastructure

- Mr Robert Nowak Division of Transport, UNECE Miss Birgit Vahemets (Operation Lifesaver Estonia),
- Mrs. Helen Sramek (Operation Lifesaver USA)
- Mr. Dan di Tota (Operation Lifesaver Canada)
- Mr. Lisandro López Piñeyro (Operacion Salvadidas [Operation Lifesaver] Argentina)

Mr. Zbigniew Szafrański - CEO, PKP Polish Railway Lines Company

There is no doubt that the train is the safest form of land transportation and would be safer still if there were fewer level crossings. The interface between road and rail at level crossings is one of the most significant risks and one that the rail sector is not able to control without support from other key players.

Level crossings are an inherently easy way for people to cross the railway and are very safe if the rules are followed by those using them. Users who neglect traffic rules at level crossings not only put themselves at risk but also people travelling on trains, both as passengers and train crew. It is very clear that most of the accidents that occur at level crossings are caused by road user and pedestrian misuse.

That is why it is so important to highlight this issue and bring these risks to the attention of level crossing users and make them aware of the risks they run by not taking care. This is of course not a problem that can be uniquely addressed by the rail community; it has to be handled as one of shared concern amongst several players, including the road and rail sectors, police forces, road users and those with responsibility for licensing those users as well as cyclists and pedestrians

30/06/2011 16:34 1 sur 17

It is a general misconception that level crossings are just a railway problem when it has always been and remains very much an interface between two modes which each have a part to play. It is simplistic to say that the railway should eliminate all level crossings. While this remains the vision; and, is the case with railways constructed in modern form; it is unrealistic to expect this will happen without the engagement of highways authorities and local, regional and national governments. Even with these parties fully engaged it will, unfortunately, be many years before the vision can be reached as the cost of grade-separation can be prohibitively expensive and closure will in some cases be fiercely resisted.

As with any risk situation it is necessary to get to the root of the problem and, in the case of level crossings, develop a campaign to educate users, Also, the rail sector needs to do more to engage and educate partners in the highways and local, regional and national governmental agencies. Changing attitudes, beliefs and behaviours will decrease the number of accidents at level crossings. This is not an option, it is essential.

It is as a significant contribution to this educational approach that ILCAD was born in 2010 as a step beyond the European Level Crossing Awareness Day (ELCAD) held in 2009. ILCAD on June 9th, 2011 focuses on educational measures and the promotion of safe behaviour at and around level crossings.

Al passaggio a livello, priorità alla vita

ILCAD is built around a range of national events held jointly at many locations in every participating country; all are focussed on the common message "Act safely at level crossings!" In addition to regular or permanent activities held throughout the year, many special educational and awareness –raising initiatives have been planned around the world: flyers handed out at level crossings, in schools, driving schools, to scouts. Posters will be displayed in railway stations and other public places, the video "Just in time" (funded by the European Commission) will be shown on screens in railway stations and on the internet and there will be special messages broadcast on radio and television as well as at press conferences organised with national and local press.

More than 40 countries as well as European and International rail organisations (UIC, CER, EIM), Operation Lifesaver, the European Transport Safety Council (ETSC), the European Level Crossing Forum (ELCF), the European Railway Agency (ERA) and the UN-ECE Transport Division. The Latin American Railway Association (ALAF), the Australasian Railway Association (ARA) and the Association of American Railroads (AAR) are involved in this campaign but there is still room for wider participation.

Nas passagens de nível não arrisque

It is encouraging that the road and rail organisations from the more than 40 countries participating in ILCAD acknowledge the shared responsibility in order to deal with this issue and it is for this reason that they are collaborating in the organisation of these events to develop public awareness and safe behaviour at and around level crossings.

Many of these same bodies have signed the European Road Safety Charter which is an initiative of the European Union. The Charter has the objective of developing concrete actions, assessing results and further heightening awareness about the need to reduce traffic accidents and fatalities through the exchange of best practices in traffic safety in Europe, while adding a European dimension to individual or collective initiatives.

UIC and by extension ILCAD have been granted the use of the logo of the UN-ECE global Decade of Action for Road Safety 2011-2020 as part of many other road safety initiatives using the motto: "Together we can save millions of lives"

The task now is to spread this message as far and as widely as possible and involve as many players as possible in the road sector, governmental agencies, railway undertakings, rail infrastructure managers, police forces, non-profit organisations dealing with railway safety education (particularly at level crossings) so that we are taking the message to the maximum number of authorities and users.

Fii atent la tren, viața ta contează

Did you know?

- That according to article 18 of the UN-ECE Vienna Convention, rail has priority at the interface with road and that road users and pedestrians have to respect the road signage and stop when requested regrettably this respect is not always present this rather too often causes accidents
- That trains can weigh several hundred tonnes and some in excess of 1000 tonnes and that the distance for a train to be able to stop can be as much as 10 times higher than that for a car
- That apart from the obvious physical damage caused by a road vehicle crashing into a train at a level crossing, there are also psychological, social and financial consequences including, loss of a family member, post-traumatic effects on the train driver, train passengers, witnesses, victims not forgetting the system disruption and the train and road traffic delays...
- Approximately a 1/3 of fatalities occurring on the rail system in Europe occur at level crossings but because these only account for around 2% of all road
 deaths, is seen outside the rail community as a minimal problem This, it is not given the societal attitude toward railway safety

A montage of user misuse of level crossings published in connection with ILCAD can be found at: http://www.youtube.com/watch?v=IBqQ1SEs_M&feature=youtu.be

Los pasos a nivel, una prioridad vital

You can find further information on good practices and educational material designed to highlight the issue of misbehaviour at and around level crossings by consulting the dedicated website: www.ikcad.org. Also, follow ILCAD through the news pages of LXinfo at www.kinfo.org. Indeed, the July 2011 issue will be covering the ILCAD events that made the news around the world.

The table below provides key level crossing statistics on a country-by-country basis, provides information on a selection of the initiatives that have been arranged by partners. The table also provides details of principal ILCAD partners around the world. (Data is as supplied to LXinfo on June 6th, 2011)
