

LXinfo

the on-line magazine for level crossing issues

Welcome to a special edition of LXinfo, issued on June 22nd, 2010, to mark the world's first International Level Crossing Awareness Day (ILCAD). Today is a significant date in the history of campaigns to address behaviours at level crossings because, on a world-wide basis, a shared message "Act safely at level crossings is being used in more than 45 countries.

ILCAD works within a mindset that there are three strands to managing risk at level crossings effectively; namely: Engineering, Education and Enforcement. The three Es have been around for many years as a representation of the need for a balanced and comprehensive approach to the issue of level crossing safety. Indeed, the origins of this approach can be traced back to the launch of Operation Lifesaver in the United States in 1972. Now, the Operation Lifesaver brand is being used directly in the Americas and now, in Europe, in Estonia.

In 2010 it is readily apparent that the three Es approach has spread way beyond Operation Lifesaver with the concept having been “ripped off and replicated” in many national programmes and now, the world’s first International Level Crossing Day raises the commitment to the concept of tackling Engineering, Education and Enforcement in parallel

Aux passages à niveau, priorité à la vie

Despite all the measures taken to indicate the presence of level crossings and make them safe, too many road users – both vehicular and pedestrian – are killed or injured at the road-rail interface all around the world, year after year.

Almost all accidents at level crossing are caused by road user behaviour rather than a failure of the level crossing system itself. That said, there is still a lot that can be done to improve the integrity of level crossings from passive where the users look out for themselves, to active controls where the road users are advised of the presence of a train by the rail authorities. Within the active concept there remain many opportunities to progress from light controls to systems with barriers too. Likewise there are a wide range of highway treatments that road authorities can contribute to making level crossings safer. But we must never forget the opportunity to eliminate level crossings as this is the Holy Grail of those committed to managing risk at level crossings.

Bahnübergänge – Sicherheit hat Vorrang

But, for as long as there are level crossings there will be a need for road users to be educated and from time to time reminded that they have a big part to play in reducing risk to themselves but also to those travelling by train. Thus, ILCAD is a world-wide initiative using the same message in every jurisdiction to encourage all road users to help make level crossings that bit safer. Many of those who come to harm on level crossings are regular and local users who take crossing the railway by a way of a level crossing as a routine activity. Indeed, in too many instances it is a case of familiarity breeding complacency and in extreme cases contempt for the rules for the safe use of the level crossing.

Al passaggio a livello, priorità alla vita

A vital characteristic of ILCAD is that it engages both rail and highways authorities as equals in the quest for improving user behaviours in pursuit of safety at level crossings. In some jurisdictions ILCAD engages motoring organisations, departments of transport, the police and those responsible for teaching road users to drive safely. Thus not only is ILCAD operating on a world-wide basis, it is pushing the boundaries by engaging a wide range of organisations who each have a part to play in the quest for improved level crossing safety.

The ILCAD message – act safely at level crossings – will be incorporated into a vast array of initiatives at national level and locally in areas where user abuse is a particular issue. For the first time the European Commission has funded production of a short film for use pan nationally.

Los pasos a nivel, una prioridad vital

Details of many of the events organised to mark the first ILCAD are detailed below. Now whether it is in print or broadcast media, driving schools, on the internet, at railway stations in shopping centres or at individual level crossings where there are issues of persistent user abuse; the same message “act safely at level crossings” will reach many millions of level crossing users around the world.

The ILCAD project involves the road sector, governmental agencies, railway undertakings, rail infrastructure managers, police forces, non-profit organisations dealing with railway safety education, from over 45 countries as well as European and International rail organisations (CER, EIM, UIC), Operation Lifesaver, the European Transport Safety Council (ETSC), the European Level Crossing Forum (ELCF), the European Railway Agency (ERA) and the UN-ECE Transport Division. This year the Latin American Railway Association (ALAF) and the Australasian Railway Association (ARA) also join the Campaign.

Nas passagens de nível não arrisque

Importantly, The European Commission (EC) is an active participant in the ILCAD initiative. The EC's DG Move (Road Safety) organised a workshop in April 2010 on level crossing safety (LXinfo May 2010) and has financed production of a video clip called "Just in time" directed at road users and pedestrians; and, designed to complement national activities in participating countries which are at the heart of ILCAD today, June 22nd, 2010. To view the video clip, go to:

<http://www.ilcad.eu/spip.php?article8>

The July 2010 issue of LXinfo will report on the successes achieved through ILCAD; meanwhile, scroll down to the analysis which sets out national level crossing safety information and details many of the initiatives taking place today, June 22nd 2010.

Aidan Nelson
Editor, LXinfo
